Submitted to the EMBL Data Library, December 1992
A; Description: Systematic sequencing of the Escherichia coli genome: analysis of the 0-2
A; Accession: S40600
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ပ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A,Description: involved in murein or cell envelope biosynthesis
A,Pathway: peptidoglycan biosynthesis
C,Superfamily: murG protein
C,Keywords: cell division; cell wall; glycosyltransferase; hexosyltransferase; peptidogl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A;Residues: 1-355 <BLAT>

A, Description: involved in murein or cell envelope biosynthesis
A, Pathway: peptidoglycan biosynthesis
C;Superfamily: murg protein
C;Keywords: cell division; cell wall; glycosyltransferase; hexosyltransferase; peptidogl

Genetics:

```
C;Species: Neisseria meningitidis
C;Date; 31-Yar-2000 #sequence_revision 31-Mar-2000 #text_change 19-Jan-2001
C;Accession: A81201

"Extensive mosaic structure revealed by the complete genome sequence
of uropathogenic Bscherichia coll.", 19917020-17024 (2002).
-I- FUNCTION: Cell wall formation. Catalyzes the transfer of a GlcNAc
subunit on undecaprenyl-pyrophosphoryl-MurNAc-pentapeptide (lipid
intermediate I) to form undecaprenyl-pyrophosphoryl-MurNAc.
(pentapeptide) GlcNAc (lipid intermediate II) (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 SAGGKRIMVMAGGTGGHVFPGLAVAHHIMAQGWQVRWLGTADRWBADLVPKHGIEIDFIR

-!- FUNCTION: Cell wall formation. Catalyzes the transfer of a GlCNAc subunit on undecaprenyl-pyrophosphoryl-MurNAc-pentapeptide (lipid intermediate I) to form undecaprenyl-pyrophosphoryl-MurNAc- (pentapeptide)GlcNAc (lipid intermediate II) (By similarity).
-!- CATALYTIC ACTIVITY: UDP-N-acetylglucosamine + MurZAc(cyl-L-Ala-gamma-D-Glu-L-Lyg-D-Ala-D-Ala)-diphosphoundecaprenol = UDP + GlcNAc-(l->4)-MurZAc(cyl-L-Ala-gamma-D-Glu-L-Lys-D-Ala-D-Ala)-diphosphoundecaprenol.
                                                                                                                                                                                                                                                                             pyrophosphory1-undecaprenol N-acety1glucosamine transferase
(EC 2.4.1.227) (Undecapreny1-PP-MurNAc-pentapeptide-UDPGlcNAc GlcNAc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PATHWAY: Peptidolycan biosynthesis; last step. SUBCELLULAR LOCATION: Inner membrane-associated (By similarity) SIMILARITY: Belongs to the glycosyltransferase family 28. MurG

Submitted (DEC-2002) to the EMBL/GenBank/DDBJ databases.
-!- PUNCTION: Cell wall formation. Catalyzes the transfer of a GlCNAc subunit on undecaprenyl-pyrophosphoryl-MurNAc-pentapeptide (lipid intermediate I) to form undecaprenyl-pyrophosphoryl-MurNAc-
(pentapeptide)GlCNAc (lipid intermediate II) (By similarity).
-!- CATALYTIC ACTIVITY: UDP-N-acetylglucosamine + MurCAc(oyl-L-Ala-
gamma-D-Glu-L-Lyy-D-Ala-D-Ala)-diphosphoundecaprenol = UDP +
GlCNAc-(1->4)-MurCAc(oyl-L-Ala-gamma-D-Glu-L-Lys-D-Ala)-

"50 million years of genomic stasis in endosymbiotic bacteria.";
Science 298:2376-2379(2002).
-!- FUNCTION: Cell wall formation. Catalyzes the transfer of a GlcNAc
subunit on undecaprenyl-pyrophosphoryl-MurNAc-
intermediate I) to form undecaprenyl-MurNAc-
intermediate I) to form undecaprenyl-Myrophosphoryl-MurNAc-
(pentapeptide) GlcNAc (libid intermediate II) (By similarity).
-!- CATALYTIC ACTIVITY: UDP-N -acetylglucosamine + Mur2Ac (cyl-L-Ala-
gamma-D-Glu-L-Lys-D-Ala-D-Ala)-diphosphoundecaprenol = DDP +1

UDP-N-acetylglucosamine-N-acetylmuramyl-(pentapeptide)
UDP-N-acetylglucosamine-nol N-acetylglucosamine transferase
(EC 2.4.1.227) (Undecaprenyl-PP-MurNAc-pentapeptide-UDPGlcNAc
(pentapeptide)GlcNAc (lipid intermediate II) (By similarity). CATALYIC ACTIVITY: UDP-N-acety1glucosamine + MuzAc (Oyl-L-Ala-Gamane - D-GIL-L-L-Lys-D-Ala-D-Ala)-diphosphoundecaprenol = UDP + GICNAc-(1->4)-MurZAc(Oyl-L-Ala-Gamma-D-Glu-L-Lys-D-Ala-D-Ala)-diphosphoundecaprenol = UDP + GICNAc-(1->4)-MurZAc(Oyl-L-Ala-Gamma-D-Glu-L-Lys-D-Ala-D-Ala)-
                                                        diphosphoundecaprenol.
PATHWAY: Peptidoglycan biosynthesis; last step.
SUBCELLULAR LOCATION: Membrane-associated (By similarity).
SIMILARITY: Belongs to the glycosyltransferase family 28. Murd
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         307 OPOLSVDAVANTLAGWSRETLLITMAERARAASIPDATERVANEVSRVAR 355
